

SIMPLIPHI YOUR POWER WITH **NON-TOXIC PHI LITHIUM ION BATTERIES**

Design an energy storage system for your home, business or RV with a **safe, simple, reliable** and **practical** lithium ion battery solution.

Simple

- Full range of kWh, Ah and voltage options
- Energy and power in one battery
- Drop-in replacement for existing lead acid battery banks
- On- or off-grid
- No thermal monitoring, cooling, fire suppression or ventilation equipment required
- No maintenance

Practical

- Stores electricity from solar, wind, diesel/gas generators, the grid or any combination
- Modular and scalable — seamlessly add more capacity if energy needs grow
- Install in small spaces
- Indoor and outdoor use in all climates

Reliable

- 10-year warranty
- High efficiency rate — more usable power for you
- Provides primary or back-up power for on- or off-grid homes and businesses
- Delivers multiple charge/discharge cycles per day
- Operates in broad temperature range of -4 to 120 degrees F
- Proven in the field for 9+ years

Safe

- Environmentally benign and non-toxic Lithium Iron Phosphate (LFP)
- No Cobalt - no hazards
- No risk of overheating or fire
- No fumes or out-gassing

Power. On Your Terms.™

Large or small, PHI battery banks are designed to meet all of your unique residential or commercial energy storage needs.

“We love that they’re completely non-toxic, less weight, less space and more reliable. Perfect for tiny housers who demand high quality in small packages!”

- Tiny Homeowner Vina L., via email

“There’s a double benefit, because in addition to our 24/7 home energy, our electric vehicle charging is free. We chose SimpliPhi because they are local, American made, they do not use toxic, non-recyclable cobalt and their batteries are 98% efficient.”

- Homeowner Pierre S., via email

“I wanted an energy storage solution in a compact location. That’s why I went with SimpliPhi’s lithium-ion technology. Flooded cell batteries or other lithium-ion batteries would have required significantly more space and new construction to attain the same energy output.”

- Homeowner Bob S., via email
